

Stanislau Yanukou

SENIOR SOFTWARE ENGINEER

✉ syanukov@gmail.com | [in stanislau-yanukou](#)

Education

Polotsk State University

M.SC. IN COMPUTER SCIENCE AND ENGINEERING

Polotsk, Belarus

Sep. 2009 - Jun. 2013

Vitebsk State Polytechnic College

B.SC. IN COMPUTER SCIENCE AND ENGINEERING

Vitebsk, Belarus

Sep. 2005 - Jun. 2009

Skills

DevOps GCP (Pub/Sub, Cloud Workflows, Cloud Storage, Scheduler), Azure, Docker, Kubernetes, Helm, Datadog

Back-end Spring Boot, Microservices, gRPC, Protobuf, Kafka, Kong Gateway, Temporal, JPA, Test Containers, REST, Liquibase, Gradle, JUnit, Mockito, PostgreSQL

Programming Java, Go, Kotlin (basic experience)

Languages English, German (B2)

Experience

Flink

SENIOR SOFTWARE ENGINEER II

Berlin, Germany

May 2023 - Present

Purchase Order Send-out System Rewrite

- Redesigned and rebuilt the purchase order send-out system from a Python/Apache Airflow monolith into a suite of Go microservices orchestrated by GCP Cloud Workflows and Cloud Scheduler, significantly improving reliability and operational visibility.
- Developed an event-driven purchase order service handling the full order lifecycle with PostgreSQL, gRPC, and GCP Pub/Sub, including pessimistic locking, snapshot-based read consistency, and transactional event publishing.
- Built a multi-stage replenishment pipeline (load, validate, generate, publish, report) with GCS-persisted state between stages, enabling reliable retry and recovery at any point in the workflow.
- Implemented multi-format file generation (EDI, XLSX, CSV, XML) with multi-channel distribution (SFTP, FTP, email, Transus EDI platform) to 60+ supplier sites across major partners.
- Resolved production failures caused by a 100-second execution limit by introducing an asynchronous callback pattern with GCP Workflows, decoupling publish operations from the timeout constraint.
- Built a configuration management service that dynamically generates GCP Workflow definitions and Cloud Scheduler jobs from supplier configurations, enabling non-engineering teams to onboard new suppliers without code changes.
- Established comprehensive monitoring with automated detection of failed workflows, missed sendout windows, and unsent order summaries, integrated with Slack and Datadog.

Automated Shelf Placement Optimization

- Designed and built an item planning service that automates product-to-hub shelf assignment, combining country-level defaults with hub-specific overrides, physical dimensions, and sales ranking data to group SKUs into placement modules.
- Developed a shelf mapping and optimization service that computes optimal SKU-to-shelf assignments across warehouse hubs, supporting dynamic mapping file processing, auto-assignment of new products, and a transactional outbox for reliable event publishing.
- Implementing a multi-objective shelf placement optimizer using Google OR-Tools CP-SAT solver, balancing product demand ranking, space utilization, placement stability, ergonomic shelf height, and accessibility — deployed as a decoupled HTTP solver service with 3D footprint calculation and module-level isolation.

apinity GmbH

SENIOR SOFTWARE ENGINEER, DELIVERY LEAD

Munich, Germany

Dec. 2021 - May 2023

- Owned the full lifecycle of microservices powering an API management SaaS platform for the insurance industry — from design and development through testing, deployment, and ongoing maintenance.
- Led the migration of inter-service communication from Axon Framework to Apache Kafka and gRPC, improving scalability and decoupling between services.
- Introduced a centralized observability stack (Spring Boot Actuator, OpenTelemetry, Grafana with Loki and Tempo), significantly reducing mean time to detection and resolution of production incidents.
- Built fully automated CI/CD pipelines on Azure DevOps for containerized applications using Docker, Azure Container Registry, and Kubernetes.
- Developed custom Kong Gateway plugins in Go to support platform-specific API routing and authentication requirements.
- Coordinated a small external engineering team — collaborated with the Product Owner on backlog refinement, conducted technical reviews, and served as the primary point of contact for escalations.

Enmacc GmbH

Munich, Germany

SENIOR SOFTWARE ENGINEER

Nov. 2017 - Sep. 2021

- Designed and implemented RESTful backend services for a professional OTC energy trading platform used by major European energy market participants.
- Drove adoption of Kubernetes and Apache Kafka, improving system resilience and enabling event-driven processing of trading workflows.
- Maintained high code quality standards through systematic code reviews, test coverage improvements, and enforcement of engineering best practices.
- Conducted technical interviews and onboarded and mentored junior engineers.

Elinvar GmbH

Berlin, Germany

SENIOR SOFTWARE ENGINEER

Mar. 2017 - Nov. 2017

- Developed the integration subsystem of a WealthTech Platform-as-a-Service, connecting its core portfolio calculation engine with custodian banks, market data feeds, and financial news providers.

Market Logic Software AG

Berlin, Germany

SENIOR SOFTWARE ENGINEER

Dec. 2015 - Feb. 2017

- Designed and implemented a data ingestion platform for an AI-powered market intelligence product, aggregating content from diverse sources (email, RSS, SOAP/REST APIs, HTML crawling), transforming it, and indexing it into an Elasticsearch cluster for downstream analytics.

Luxoft Poland. Sp. z o.o.

Wroclaw, Poland

SENIOR SOFTWARE ENGINEER

Oct. 2014 - Dec. 2015

- Designed and developed a monitoring tool for Hazelcast cluster memory management with automated eviction of stale data.
- Implemented MapReduce jobs on Apache Hadoop and developed Apache Spark applications to process large volumes of financial data.
- Authored Pig scripts for ETL pipelines and contributed to an internal dashboard for real-time job status visualization.
- Conducted technical interviews for the engineering team.

ISsoft Solutions

Minsk, Belarus

JAVA DEVELOPER

Aug. 2013 - Oct. 2014

- Developed backend services for a restaurant operations platform, enabling order management and workflow automation.

Intetics Co.

Minsk, Belarus

JAVA DEVELOPER

Aug. 2012 - Aug. 2013

- Built an analytics system that evaluated users' mobile consumption patterns (SMS, voice calls, data usage) across providers, simulated alternative tariff plans, and recommended cost-optimal options.

Artezio

Vitebsk, Belarus

JUNIOR JAVA DEVELOPER

Feb. 2011 - Jun. 2012

- Developed a time-tracking web application for internal project management and resource allocation.
